LogBox - Amag & Porsche Holding

Challenge your friends!

Also, we provide LeaderBoards... Easily compare your driving to your friend's.
Improve and stay top of the list at all times!

LogBox

The LogBox is a unique device since it combines engine and GPS data in a very effective way while providing node-to-network communication with its built-in GSM module.

Lower your insurance rates

Behaviour data is then transferred to the network and can be shared with 3rd-parties.
Great driving style? Lower rates!

Car stats & everything else

The app collects historical driving data over time, fuel stats, mileage and engine performance.

It also helps you keep track of car related tasks, renewing your insurance and remembering when to get your car inspected won't be an issue anymore!

Our idea

We use data from all sources provided by LogBox and along with server pre-processing we determine user behaviour data. User driving style is then converted to a score.

Drive safe to get high scores.

Speed — Score — Engine RPM
Accelerator peak — Braking frequency
Other?
